

The Dark Side of the Moon Asset Class Scoreboard

FEBRUARY 17, 2014 BY [ATTAIN CAPITAL](#) [LEAVE A COMMENT \(EDIT\)](#)

It's a new year and new returns for our asset class scoreboard, where the investment classes returns are put to the test to see how they do from the beginning to the end of each year. It seems as though the "Bulls" in the final 2013 scoreboard, have warped into the dogs of January, and vice versa.

Asset Class	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	2014 YTD
U.S. Real Estate	3.58%												3.58%
Bonds	1.64%												1.64%
Cash	0.01%												0.01%
Hedge Funds	-0.73%												-0.73%
Commodities	-1.78%												-1.78%
Managed Futures	-2.31%												-2.31%
U.S. Stocks	-3.46%												-3.46%
World Stocks	-4.66%												-4.66%

(Disclaimer: past performance is not necessarily indicative of future results)

(Disclaimer: For source data look at chart below)

Maybe it's just the die-hard Pink Floyd's fan that we are, but we can't help but think that January's chart looks a little bit like the Dark Side of the Moon cover...

Sources: Managed Futures = Newedge CTA Index, Cash = 13 week T-Bill rate,
 Bonds = Vanguard Total Bond Market ETF (BND),
 Hedge Funds= IQ Hedge Multi-Strategy Tracker ETF (QAI)
 Commodities = iShares GSCI ETF (GSG); Real Estate = iShares DJ Real Estate ETF (IYR);
 World Stocks = iShares MSCI ACWI ex US Index Fund ETF (ACWX);
 US Stocks = SPDR S&P 500 ETF (SPY)

There's something about the Dark Side of the Moon album cover that resonates with us as finance nerds... as strange as it sounds. You see, just as the prism releases its rainbow colors (investments) into existence... those colors (investments) are on a never ending trajectory. Lights never have a stopping point, and neither do investments (unless of course they shut down). For the sake of this chart, it's as if there's a new color prism at the start of each year, as if there is no prior performance to take into consideration. Each investment class gets a clean slate no matter if posting a +30% or -7% returns the year prior.

The problem is it doesn't work that way. Investors are very aware that Stocks posted a +30% return in 2013, despite its most recent monthly negative performance; just like investors are aware of [Managed futures recent struggle](#) {past performance is not necessarily indicative of future results}. But it's not uncommon for one years Bulls to quickly turn into the Dogs of the next. Stocks and World Stocks went from the top two investments, to the bottom two, with [Bonds showing the first sign of life](#) in quite some time {past performance is not necessarily indicative of future results}. You're probably thinking, that's the whole point of asset allocation, right? Pick the best or worst performers of the year prior? That's why the finance community emphasizes so much attention on yearly returns right? **Wrong.**

This is a very near sided view. It's about where the light (investment) was 20-30 years ago, and where it will be 20-30 years from now. Filing down returns to just 12 months can greatly modify how well an asset class is *really* performing. [Adjusting an asset classes yearly returns by just a couple of days](#) could greatly alter where these investments would finish on the scoreboard. Imagine how it would look if you alter it by 6 months?

P.S. — We've heard some people question why Managed Futures isn't showing crisis period performance with Stocks experiencing volatility. The simple answer is [negative correlation does not equal non-correlation](#), and we provide a deeper explanation [here](#).

DISCLAIMER

Forex trading, commodity trading, managed futures, and other alternative investments are complex and carry a risk of substantial losses. As such, they are not suitable for all investors.

The entries on this blog are intended to further subscribers understanding, education, and – at times- enjoyment of the world of alternative investments through managed futures, trading systems, and managed forex. Unless distinctly noted otherwise, the data and graphs included herein are intended to be mere examples and exhibits of the topic discussed, are for educational and illustrative purposes only, and do not represent trading in actual accounts. Opinions expressed are that of the author.

The mention of specific asset class performance (i.e. +3.2%, -4.6%) is based on the noted source index (i.e. Newedge CTA Index, S&P 500 Index, etc.), and investors should take care to understand that any index

performance is for the constituents of that index only, and does not represent the entire universe of possible investments within that asset class. And further, that there can be limitations and biases to indices such as survivorship and self reporting biases, and instant history.

The mention of general asset class performance (i.e. managed futures did well, stocks were down, bonds were up) is based on Attain's direct experience in those asset classes, estimates of performance of dozens of CTAs followed by Attain, and averaging of various indices designed to track said asset classes.

The mention of market based performance (i.e. Corn was up 5% today) reflects all available information as of the time and date of the publication.

Managed Futures Disclaimer:

Past Performance is Not Necessarily Indicative of Future Results. The regulations of the CFTC require that prospective clients of a managed futures program (CTA) receive a disclosure document when they are solicited to enter into an agreement whereby the CTA will direct or guide the client's commodity interest trading and that certain risk factors be highlighted. The disclosure document contains a complete description of the principal risk factors and each fee to be charged to your account by the CTA.
